Instruction

1. Develop a simple HTML form that can be submitted.
2. Validate the form. Make sure users submit data in the correct format. Display error messages where applicable.
3. Use a backend language of your choice (Python, Ruby, PHP, etc.) to store the submitted data at a persistent storage (PostgreSQL, MongoDB, MySQL, etc.).
4. Display a list of all submissions (latest and past ones) in table form upon successful submission of the form.

Form Fields

1. Full Name
2. Email Address
3. Phone number

Form Validation

1. All fields are required
2. Email must be in the correct format (e.g. name@domain.com)
3. Phone number must be in the correct format (e.g. +60123456789)

Sample Form

Full Name

Email Address

Phone Number

Submit

Sample Table of All Submissions

ID	Full Name	Email Address	Phone Number	Submitted at
1	John Doe	john@example.com	+60123456789	…
